

Figure 2-7
Mile 102 Montoya Arroyo

The mouth of Montoya Arroyo is on the western bank of the river at mile 101.5. The watershed covers 23 square miles and does not have a sediment control dam. The banks of the arroyo outside the ROW are heavily vegetated. This part of the ROW was originally a part of the river channel with an island separating two channels. The western channel was diked off and filled in during the RGCP construction.

Integrated USIBWC Land Management Alternative

Point Project Measures	ID	#	Area (ac)
Native vegetation planting	102A	1	2.8
Bank shave downs*	102B	3	24.7

Targeted River Restoration Alternative

Point Project Measures	ID	#	Area (ac)
Open former meanders	102C	1	2.8
Modify dredging at arroyos by creating embayments	103D	1	0.17

* Bank shave downs acreage is included in the Targeted River Restoration Alternative as a linear measure "Seasonal peak flows".
